“ **The new edition of the international Women&Technologies® conference will take place on 9th November at the "Leonardo da Vinci" National Museum of Science and Technology in Milan.** ”

For_Immediate_Release:

[\(Free-Press-Release.com\)](#) September 29, 2009 -- “[...] technological research requires integrating the contributions of a plurality of disciplines, according to what is known as a **'holistic approach'** : not just logic and maths, but also psychology, the social and cognitive sciences, anthropology, literature. This is where true **innovation** is born, from the ability to consider different points of view, asking new questions and finding new solutions. **Women** , as bearers of a vision that always perceives the **“humanistic” components** of any given problem, can make an original contribution in this sense [...]”.

This is the leitmotif of **Women&Technologies® (2008-2015)** , the international conference that highlights female excellence in research, technological development and innovation.

Can the **transversal nature of technologies** represent an ideal meeting point for different disciplines, both scientific and humanistic? How can we support the **“2015 generation”** today in approaching the techno-scientific world in the schools, companies and public administrations of tomorrow? Which **skills** and abilities are required to face the current transformation of organisational, communication and economic models?

These are the main themes of the 2009 edition of Women&Technologies®, which will take place in Milan on 9th November at the National Museum of Science and Technology.

The conference will also host the awarding of the **“Le Tecnovisionarie®” prize 2009** , an acknowledgement dedicated to women who are able to “invent the future” by creating technologies.

Participation in the conference is **free** .
